Dear Dr.

*Affix Patient Label here*

Baby was found to have one or more of the following:

- Stable but clicky hips on examination
- Asymmetrical skin creases at the thigh
- Risk factors for Development Dysplasia of the Hip (DDH) – breech delivery / family history of hip problems / congenital dislocation (but no instability).

Baby is now discharged back to your care. Please arrange a radiograph with DDH views at between 4-6 months of age and send a copy of the report to Associate Professor Sue Stott at Starship Orthopaedics. Radiographs can be ordered through the Starship Radiology Department or via the private sector.

Yours sincerely
