

# TAMARIKI MĀORI INJURIES

## Hospital admissions (2010-2014)

2,120 tamariki are hospitalised each year for an unintentional injury—  
**That's 6 a day** 

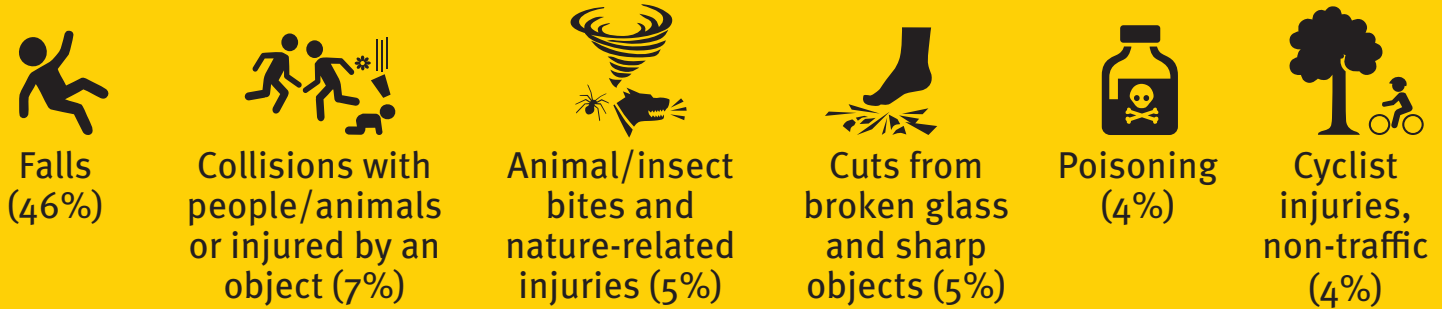

**29%** of all child unintentional injury admissions are tamariki Māori

 Hospitalisation rates for tamariki are **HIGHER** than the rates for all children in NZ

**40%** of all children hospitalised are under 5 years old

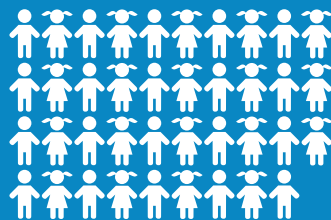

### Leading causes of non-fatal injuries:

## Deaths (2008-2012)

**39** tamariki Māori die each year from an unintentional injury

**9 out of 10** deaths happen in the home. 0-4 year old deaths are the most common

**38.8%**  Tamariki Māori death rates decreased **38.8%** but are still higher compared to other ethnic groups

### Leading causes of death:
