

## **Blood**

500ml water  
10ml Red food colouring  
½ ml Green food colouring

Mix in red colouring. Add green colour with caution as you do not want to make it too dark!

## **Blood clots**

Glycerine  
Gelatine  
Water  
Red and green food colouring

Combine equal quantities of prepared glycerine and gelatine with water. Add colour cautiously, red first a few drops at a time. Be very careful adding the green as you only need one drop to give the blood that dark look

## **Vomit**

1 can Campbell's vegetable soup

Warm the soup a little, fill your mouth and expel soup while making vomiting noises  
Or simply open the can and pour

## **Mucous**

KY jelly  
Green or yellow gel food colouring  
Milk

Use a tube of KY jelly and the gel food colouring. Mix together for effect. Add a small dash of milk to make it cloudy. Green and yellow make a good sample.
