Rationale for starting treatment with SCIg			
Ensuring their child is well prior to infusion			
Safe storage of product in fridge at home			
Removal of product from fridge at least 30 minutes prior to infusion			
Aseptic technique (hand-washing; aseptic non-touch technique)			
Identification of required equipment			
Set up of equipment for administration			
Appropriate drawing up of medication into syringes			
Appropriate priming of infusion set			
Selection of appropriate area for SCIg infusion			
Safe insertion of butterfly needle at correct angle			
Appropriate infusion rate (either manual push or accurately set up on pump)			
Safe removal of butterfly needle			
Safe disposal of sharps/equipment			
Record keeping in Evogam® patient diary			
Awareness about possible reactions to SCIg			
Awareness about how to manage possible adverse reactions			
Identifying a support person to assist with SCIg infusions			
Knowledge about syringe driver set-up/settings (if applicable)			
Maintenance of the syringe driver (if applicable)
